WS - New Hydraulic Motor Series from White Drive Products

White Drive Products (Hopkinsville, KY) has released its latest new family of low speed high torque hydraulic motors. Designated the WS series, these motors feature flow rates up to 76 LPM [20 GPM] continuous, torque to 824 Nm [7295 lb-in] continuous, and pressures up to 207 bar [3000 PSI] continuous.

Intended applications include use with agricultural equipment, skid steer attachments, augers, mowers, and others requiring greater torque under demanding conditions.

WS motors are designed with a three zone commutator valve for higher flow capacity, heavy duty tapered roller bearings for handling increased side loads, and an extra large drive link enabling these motors to withstand pressure and torque spikes.

9 displacements are available ranging from 100 cc [6.1 in³] / revolution to 508 cc [30.3 in³] / revolution. Nine (9) shaft options, seven (7) mounting options, and a wide variety of porting options are available to meet all application needs.
